

Maine Woods Pellet's

We offer premium hardwood blend pellets from Maine Woods Pellet Company, located in Athens, Maine.

This pellet is a blend of approximately:
65% hardwood (primarily maple & yellow birch)
35% softwood (fir and pine).

The highest grade pellets, Maine Woods pellets meet or exceed all the specifications of a premium pellet: Consistent hardness and energy content; uniform dimension (less than 1.5 inches long); limited sawdust (amount of fines passing through .125 inch screen no more than .5 percent by weight); low salt content (no more than 300 parts per million); and low ash content, an important factor in maintenance frequency

We pre-screen our wood before processing it and we use no debris or additives of any kind. Many pellet manufacturers will use vegetable or soybean oil and some even use plastics. Our pellets are made with 100% wood - no additives, no oils, no plastics, and no polystyrene.

A premium wood pellet has no additives like glue or other adhesives.

Quantities

Premium pellets in 40lb bags or bulk.

Independently tested for quality.
