

Billy Goat Industries Inc.
AE1300H 30" & AE401H 19" Aerator

AE1300H

This machine combines true 30" wide aeration and speed up to 4.3 mph to complete 1/4 acre in as little as 15 minutes! That's 59% faster than a 26" drum! Plus no more lifting on turns; aerate in reverse; do trim and edges with ease; and significantly improve hole quantity and quality vs. drum aerators.

The AE1300H features Patent Pending variable aeration density (VAD™) and creates 2-10 times more holes than drum models in one pass (8-48 holes per sq. ft.) This eliminates double or triple aerating with drum aerators that have fixed hole patterns as low as 4 per sq. ft. and saves significant time. VAD also offers ability to do patch repair and seed bed prep in one pass by simply slowing down over bare spots.

Core Depth Up to 3" Tines 8 Weight (lbs.) 516 Length (in.) 67 Height (in.) 46 Width (in.) 34.5

AE401H

This unit completely eliminates the conventional and cumbersome center wheel and center drum designs found on other units, which are prone to wear, vibration and damage. Billy Goat's outboard drive wheels also eliminate center wheel slip and abuse from ramp loading with the tines engaged.

Additionally, the AE401 also eliminates bulky steel weights, in favor of a simple to use water weight positioned directly over the tines for better aeration depth (full tank = 50 lbs.). The unit features the industry's softest tine engagement and exclusive Lift N Lock™ disengagement for best in class comfort and productivity. After use and during transport, tilt up serviceability, removable tine stars, and Fold-n-Go™ handles, and easy adjust drive chains make service and transport convenient and simple.
